LINQ – Assignments

* Using SampleData class in your solution, try these queries:

1- Display book title and its ISBN.

2- Display the first 3 books with price more than 25.

3- Display Book title along with its publisher name.

4- Find the number of books which cost more than 20.

5- Display book title, price and subject name sorted by its subject name ascending and by its price descending.

6- Display All subjects with books related to this subject. (Using 2 methods).

7- Display books grouped by publisher & Subject.

Bonus:

1- Ask the user for a publisher name & sorting method (sorting criteria (by Title, price, etc….) and sorting way (ASC. Or DESC.))…. And implement a function named FindBooksSorted() that displays all books written by this Author sorted as the user requested.
